March 2022

- Drawing a circle of radius 4cm . Taking a point P outside the circle at a distance of 7cm from the centre of the circle and constructing a pair of tangents to the circle from that point using Python.

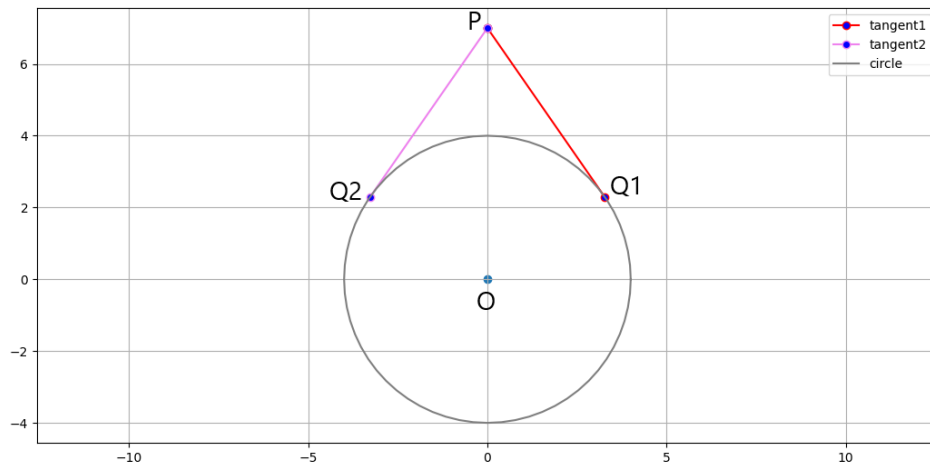

Figure 1:

- Calculating the length of tangent PQ_2 , which is the third side of the triangle OQ_2P , right-angled at Q_2 using the Pythagorean theorem using C.

```
D:\c>gcc exe.c
D:\c>a.exe
length of OQ2 = 4
length of OP = 7
length of PQ2 = 5.744563
D:\c>
```
